

The Pennsylvania Towing Association is proud to announce the new "Safety Committee". The Safety Committee will meet periodically to bring a refreshed outlook for safety in and out of the workplace.

An effective Safety Committee shall encourage safety awareness, and get all of the employees actively involved in the safety program, motivating employees to follow safety practices. An effective employee safety program will provide positive feedback to identify and correct safety hazards in the early stages. Through group participation, reporting systems, and meetings, the work environment will become a much friendlier place for all involved.

The Safety Committee members are working together for a common goal which is for the work place to become a safer place for everybody. The committee will rely on constant communication to bring all safety related issues to their attention in order to prevent personal injury and unnecessary accidents in the workplace. It will be a shared responsibility by all involved to make this program a success.
